DEL STAYED TOWER

DELMEC STAYED POLE

BESPOKE TOWER SOLUTION

Overview:

A Delmec Stayed Pole solution is a tubular steel structure anchored to a concrete base or rooftop and stayed at four points. This structure is suited to locations where there is limited space or minimal civil work is required.

Technical Specification:

Stayed Pole solutions range in heights from 8-14m typically and have an outer diameter of 90mm. The pole is anchored at two points and anchored back at four points at base level. The stayed pole can typically cater for one operator loading.

A full technical specification can be provided upon request.

Features & Benefits:

- Minimised time spent on site for structure installation
- Structure ideal for locations where space is an issue
- Minimised civil work required

Various other requirements can be achieved if required by the client.

For more information, contact info@delmec.ie or call +353 (0)59 914 3059.

Note: A site suitability check by a competent qualified engineer is recommended.
